

PLANNER

The Family Operating System

1 Core Purpose

The Planner is a centralized family productivity system designed to:

- Reduce mental load for parents
- Coordinate child-related activities
- Track habits and routines
- Simplify daily execution
- Sync family schedules
- Link children's activities to parent dashboards

It becomes the **control centre of family life**.

2 Core Pillars of the Planner

The Planner combines:

1. 📅 Calendar (shared + child-linked)
2. ✅ Tasks & To-Do Lists
3. ⌚ Reminders & Notifications
4. 📝 Notes & Notepad
5. 🛒 Grocery & Meal Planning
6. 📊 Habit & Interest Tracking
7. 👤 Multi-User Family Access
8. And more

3 How It Works (System Logic)

🔑 Account Hierarchy Logic

Parent Account (Primary Owner)

- Full access
- Adds children
- Controls permissions

- Views analytics

Child Account (Sub-Profile)

- Linked to parent
- Has its own schedule
- May access limited features (future scale)
- Usage statistics visible to parent

Core Logic Structure

Every planner item must have:

- Owner (Parent / Child)
- Type (Task / Event / Habit / Note / Grocery / Meal)
- Date & Time
- Recurrence setting
- Reminder logic
- Linked child (optional)
- Completion status

Feature Breakdown

1. Shared Calendar

Includes:

- Parent calendar
- Individual child calendar
- Family view
- Appointment booking
- Recurring schedules

Special Logic:

- Parent can assign event to:
 - Self
 - One child
 - Multiple children
- Color-coded per child

- Sync option (Google Calendar / Apple in future)

2. Tasks & Checklist

Includes:

- Daily to-do list
- Recurring chores
- Shared responsibilities
- Completion tracking

Logic:

- Tasks can be assigned
- Status: Pending / Completed
- Parent sees completion %

3. Habit Tracking

Track:

- Reading
- Sports practice
- Sleep routine
- Screen time
- Homework completion

System calculates:

- Streak
- Weekly progress
- Monthly trend

Parents see stats dashboard.

4. Grocery & Meal Planner

- Weekly meal plan builder
- Auto-generate grocery list
- Mark purchased
- Save recurring meal templates

Future:

- Integration with grocery stores
- AI meal suggestions

5. Notes & Notepad

- Quick notes
- Voice-to-text option (future)
- Linked to child or general family

6. And more

User Flow / User Journey

Parent Journey

Step 1:

Login → Dashboard → Tap “Planner”

Step 2:

Choose View:

- My Day
- Family Calendar
- Child 1
- Child 2

Step 3:

Create New Entry

→ Select Type (Task / Event / Habit / Meal / Grocery)

Step 4:

Assign:

- Date
- Reminder
- Child (optional)
- Recurrence

Step 5:

Save

Notifications trigger based on settings.

Child Linked View (Future Scaling)

Child logs in:

- Sees own schedule
- Marks tasks complete
- Sees habits

Parent receives summary data.

Integrations

MVP Integrations

- Push notifications
- Basic in-app calendar
- Secure user database
- PDF export of schedule

Full Launch (August 2026)

- Google Calendar API
- Apple Calendar integration
- SMS reminder system
- Wearable integration (Apple Watch reminders)
- School calendar import
- Appointment booking integration (clinics, daycare)
- AI recommendation engine

User Stories

Parent

As a parent, I want one place to manage my family's schedule, so I don't forget important responsibilities.

Child

As a child, I want to see my daily tasks clearly, so I know what I'm responsible for.

Family

As a family, we want shared visibility so there's less confusion and conflict.

Notes:

[Save]

Analytics Dashboard (Parent View)

Include:

- Task completion %
- Habit streaks

- Weekly productivity summary
- Child engagement stats
- Screen usage (future)

This becomes powerful.

10 What To Include for August 2026 Full Launch

Must Have:

- Stable shared calendar
- Habit tracking with analytics
- Child linked accounts
- Push notifications
- Data dashboard
- Seamless UI
- Multi-child switching
- Recurring automation
- Secure cloud backup

11 Future Upgrades

- AI auto-scheduling
- Smart conflict detection
- Predictive reminders
- Family goal tracking
- Gamification (badges for kids)
- Rewards system
- School integration
- Homework sync
- Voice assistant integration
- Budget planning module

12. Free Version

- 2 child profile

- Basic calendar
- Limited recurring tasks
- Limited habit tracking (2 habits max)
- No analytics dashboard
- No calendar sync

1 Result of This Feature

- High daily usage
- Strong retention
- Strong family dependency
- Emotional utility
- Cross-selling potential
- Platform stickiness

This is what makes your app habit-forming.

Strategic Advice

For MVP:

Do NOT include:

- Meal AI
- Complex analytics
- School integrations
- Child login accounts (optional V1.5)

Keep V1 simple:

- ✓ Calendar
- ✓ Tasks
- ✓ Basic Habit tracking
- ✓ Reminders
- ✓ Child assignment

Everything else can evolve.

Final Founder Note

Planner is not just a feature.

It becomes:

- Your daily engagement engine
- Your subscription justification
- Your behavioural data backbone
