

V1 PRIORITIZATION (Lean, Strategic, Fundable)

TIER 1 — CORE FOUNDATION (MUST HAVE)

These make the app functional.

1 Authentication & Account Management

Purpose

Secure onboarding and user identity management.

Includes

- Parents sign up / login (Email + password)
- Parent account creation
- Add/edit child
- Forgot password
- Basic onboarding flow
- Secure data storage
- Multi-child support under one parent account

2 Profile (Parent & Child)

Purpose

Central data layer powering the entire system.

Parent Profile Includes:

- Name
- Email
- Profile photo
- Location (for Needle)

Child Profile Includes:

- Name
- DOB / Age
- Allergies
- Medical notes
- Food preferences

- Hobbies
- Likes / dislikes
- Custom notes field
- Multi-child support

Logic

All Planner, Child Hub, and Notifications link to a specific child profile.

✅ Why first?

Everything else depends on this data.

3 Planner (Core Version)

Purpose

Drive daily/weekly app engagement.

Includes:

- Add task
- Assign to child
- Set date & time
- Add recurring tasks
- Set Reminder toggle
- Mark as complete
- Weekly list view (Simple weekly list view, not complex calendar yet)
- Today view

Does NOT include:

- Calendar sync (Google/Apple)
- Advanced AI planning
- Shared parent accounts (future)

✅ Why?

These drives daily usage.

4 Dashboard (Simplified)

Purpose

Create structure & clarity on login.

Includes:

- Today's tasks
- Upcoming tasks
- Quick child summary
- Notification preview
- Quick add task button

DO NOT INCLUDE:

- AI
- Insights
- Complex widgets
- No advanced analytics yet.

Why?

Makes the app feel structured and purposeful.

5 Notifications (Basic Push)**Includes:**

- Planner reminders
- Child Hub update alerts
- Optional Feed notifications (will no be included)

Does NOT include:

- No smart logic yet.

Why?

Retention driver.

TIER 2 — HIGH-VALUE DIFFERENTIATOR (KEEP SIMPLE)**6 Child Hub (Lite Version)****Purpose**

Centralized child instruction & routine system.

Includes:

- Parent creates routine instructions

- Upload notes
- Add routine instructions
- Sections:
 - Feeding
 - Sleep routine
 - Medical instructions
 - Emergency contacts
 - Custom notes
- Share read-only secure link
- Export as PDF

DO NOT include yet:

- Institutional dashboard
- Role-based hospital accounts
- Digital signatures
- Role permissions
- Compliance infrastructure

✅ Why?

This is your strategic differentiator — but keep it light to avoid complexity explosion.

7 Needle (Basic Version)

Purpose

Location-based service discovery for parents.

Includes:

- Category search (Doctors, Daycare, Sports, Stores)
- Location-based filtering/search
- Distance filter
- Rating filter
- “Open Now” filter
- Map + List view
- Basic filters:
 - Distance
 - Rating

- Open now

DO NOT include:

- In-app booking
- Payments
- Sponsored listings
- Advanced ranking
- No ads

✅ Why?

Validates whether parents actually use it.

Tier 3 — Optional for V1 (Only if time allows)

As discussed, FEED will come in V2, COMPLETELY REMOVE IT

7 Feed (Minimal Version)

Very basic:

- Post
- Comment
- Like

No:

- Groups
- Moderation complexity
- Media-heavy posts

⚠️ Honestly?

You could delay Feed to V1.5 if needed.

Community adds complexity + moderation risk.

What Should NOT Be in V1

Remove from V1 completely:

- AI anything
- Business portals
- Verified institutions
- Booking system

- Payment system
- Growth charts
- Advanced analytics
- Investor dashboard
- Smart recommendations

Those are 2026 scale features.

Success Metrics for V1

- % of users adding at least 1 child
- % of users creating 3+ tasks weekly
- Weekly retention rate
- Child Hub usage rate
- Needle search frequency

V1 Philosophy

This is a validation MVP, not a scale product.

No AI

No enterprise dashboards

No complex integrations

No over-engineering
